

Cory James Crook

Senior Software Engineer & Architect

SUMMARY

I have almost half a decade in software engineering experience working with modern tech stacks, solving some really great problems in healthcare. I am agnostic to the exact industry I work in, as long as there is good to be done, and interesting problems to solve along the way. I didn't always work in software. I have a strong background in media, business management and project management. I love music, film & television (is that even a thing anymore?) and camping & hiking. I am constantly learning. Learning to be a better engineer. Learning to be a more effective leader. Learning how to be a good person.
